SUBJECT INDEX

Advanced architecture for graphics and image processing, 54
Airborne video bandwidth compressor, hardware systems design of an, 162
Application of a digital image processing system to automatic fabric control with coherent light, 181
Applications, image processing operations and systems for legal, 36
Architecture for graphics and image processing, advanced, 54
Architecture for a minicomputer-based interactive image processing system, powerful hardware/software, 129
Architecture of Vicom digital image processor, system, 78
Architectures, processing display system, 83
Architectures, transportability of image processing, 105
Array processors in image processing, use of, 43
Automatic fabric control with coherent light, application of a digital image processing system to, 181
Automating image interpretation, PAR image processing system (PARIPS): a testbed for, 119

Bandwidth compressor, hardware system design of an airborne video, 162

Camera and video tape recording system for motion analysis, high-speed television, 58
Cartographic systems at the Defense Mapping Agency Aerospace Center, digital, 17
Cartography and the analysis of remote sensing data, 13
Coherent light, application of a digital image processing system to automatic fabric control with, 181
Compressor, hardware systems design of an airborne video bandwidth, 162
Computer configuration, real-time image, 38
Configuration, real-time image computer, 38
Control with coherent light, application of a digital image processing system to automatic fabric, 181
Cost microcomputer system for Landsat analysis and geographic data base applications, development and implementation of a low, 145

Data base applications, development and implementation of a low cost microcomputer system for Landsat analysis and geographic, 145

Dedicated applications or interactive image processing, microprocessor-based image processing system for, 136
Defense Mapping Agency Aerospace Center, digital cartographic systems at the, 17
Design of an airborne video bandwidth compressor, hardware systems, 162
Design for an interactive image processing work station, innovative, 94
Design requirements in land-use planning, image processor, 2
Development and implementation of a low cost microcomputer system for Landsat analysis and geographic data base applications, 145
Development system for tactical image exploitation, interactive algorithm, 29
Digital cartographic systems at the Defense Mapping Agency Aerospace Center, 17
Digital image processing in education, 22
Digital image processing system to automatic fabric control with coherent light, application of a, 181
Digital image processor, system architecture of Vicom, 78
Display or processor?, 48
Digital reconnaissance imagery processing system for real-time and near-real-time imagery exploitation, 98
Display system architectures, processing, 83

Education, digital image processing in, 22
Enhancement of tone scale, interactive, 147
ETH-Zurich, large scale multipurpose interactive image processing facility at, 154

Fabric control with coherent light, application of a digital image processing system to automatic, 181
Feature extraction in one pass, labeling and simultaneous, 173

Geographic data base applications, development and implementation of a low cost microcomputer system for Landsat analysis and, 145
Geology and image processing, 9
Graphics and image processing, advanced architecture for, 54

Hardware/software architecture for a minicomputer-based interactive image processing system, 129
Hardware systems design of an airborne video bandwidth compressor, 162
High resolution imagery from meteorological satellites, on-line processing of, 112
High-speed television camera and video tape recording system for motion analysis, 58

Image computer configuration, real-time, 38
Image exploitation, interactive algorithm development system for tactical, 29
Image interpretation, PAR image processing system (PARIPS): a testbed for automating, 119
Image processing operations and systems for legal applications, 36
Image processor design requirements in land-use planning, 2
Image processor, system architecture of Vicom digital, 78
Imagery exploitation, digital reconnaissance imagery processing system for real-time and near-real-time, 98
Imagery from meteorological satellites, on-line processing of high resolution, 112
Imagery processing system for real-time and near-real-time imagery exploitation, digital reconnaissance, 98
Innovative design for an interactive image processing work station, 94
Interactive algorithm development system for tactical image exploitation, 29
Interactive enhancement of tone scale, 147
Interactive image processing facility at ETH-Zurich, large scale multipurpose, 154
Interactive image processing, microprocessor-based image processing system for dedicated applications or, 136
Interactive image processing system, powerful hardware/software architecture for a minicomputer-based, 129
Interactive image processing work station, innovative design for an, 94
Interpretation, PAR image processing system (PARIPS): a testbed for automating image, 119

Labeling and simultaneous feature extraction in one pass, 173
Landsat analysis and geographic data base applications, development and implementation of a low cost microcomputer system for, 145
Large scale multipurpose interactive image processing facility at ETH-Zurich, 154
Legal applications, image processing operations and systems for, 36
Light, application of a digital image processing system to automatic fabric control with coherent, 181
Low cost microcomputer system for Landsat analysis and geographic data base applications, development and implementation of a, 145

Meteorological satellites, on-line processing of high resolution imagery from, 112
Minicomputer-based interactive image processing system, powerful hardware/software architecture for a, 129
Microcomputer system for Landsat analysis and geographic data base applications, development and implementation of a low cost, 145
Microprocessor-based image processing system for dedicated applications or interactive image processing, 136
Motion analysis, high-speed television camera and video tape recording system for, 58
Multipurpose interactive image processing facility at ETH-Zurich, large scale, 154

Near-real-time imagery exploitation, digital reconnaissance imagery processing system for real-time and, 98

On-line processing of high resolution imagery from meteorological satellites, 112

PAR image processing system (PARIPS): a testbed for automating image interpretation, 119
(PARIPS): a testbed for automating image interpretation, PAR image processing system, 119
Planning, image processor design requirements in land-use, 2
Powerful hardware/software architecture for a minicomputer-based interactive image processing system, 129
Processing display system architectures, 83
Processor, display or, 48
Programmable image processing element, 66
Real-time image computer configuration, 38
Real-time and near-real-time imagery exploitation, digital reconnaissance imagery processing system for, 98
Reconnaissance imagery processing system for real-time and near-real-time imagery exploitation, digital, 98
Recording system for motion analysis, high-speed television camera and video tape, 58
Remote sensing data, cartography and the analysis of, 13

Satellites, on-line processing of high resolution imagery from meteorological, 112
Scale, interactive enhancement of tone, 147
Scale multipurpose interactive image processing facility at ETH-Zurich, large, 154
Sensing data, cartography and the analysis of remote, 13
Simultaneous feature extraction in one pass, labeling and, 173
Software architecture for a minicomputer-based interactive image processing system, powerful hardware/, 129
System architecture of Vicom digital image processor, 78
System architectures, processing display, 83
Systems design of an airborne video bandwidth compressor, hardware, 162

Tactical image exploitation, interactive algorithm development system for, 29
Tape recording system for motion analysis, high-speed television camera and video, 58
Television camera and video tape recording system for motion analysis, high-speed, 58
Testbed for automating image interpretation, PAR image processing system (PARIPS): a, 119
Tone scale, interactive enhancement of, 147
Transportability of image processing system architectures, 105

Use of array processors in image processing, 43

Video bandwidth compressor, hardware systems design of an airborne, 162
Video tape recording system for motion analysis, high-speed television camera and, 58

Work station, innovative design for an interactive image processing, 94
